

Samuel Stanley

Seattle, WA • (360) 529-1617 • samcstanle@gmail.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Education

Washington State University

B.S. in Computer Science, Minor in Mathematics

Cumulative GPA: **3.99/4.0**, Summa Cum Laude

Pullman, WA

Aug 2022 – Jun 2025

Experience

Oracle Cloud Infrastructure (OCI)

Software Engineer - Key Management Service

Seattle, WA

Jul 2025 - Present

- Owned a safety initiative in Go, contributing to operational improvements and presented outcomes in executive operations meetings.
- Led an initiative to optimize system resource usage, reducing disk consumption by 20% across production hosts.
- Owned the deployment cycle for key applications globally, ensuring reliable delivery and consistent system operation.

Voiland College of Engineering and Architecture

Teaching Assistant, Algorithm Design and Analysis

Pullman, WA

January 2024 - May 2024

- Oversaw a lab section of 18 Data Structure students at Washington State University.
- Responsible for hosting a weekly 3 hour lab where I demonstrated data structure methods for linked lists, stacks, queues, binary search trees, and other data structures.
- Provided a minimum of two office hours per week where I debugged student's programs and tutored them on computer science related topics including: discrete math, computer architecture, and algorithm design.

Skills Summary

Languages C/C++, Go, Java, JavaScript, Python, SQL

Systems Linux, Networking (TCP/IP, UDP), Distributed Systems

Tools Git, Docker, Terraform, PostgreSQL, CMake, Make, GitHub Actions

Soft Skills SDLC, CI/CD, Analytical Problem Solving, Communication

Projects

ASL Alphabet Translator • Python, OpenCV, Mediapipe, scikit-learn, NumPy • [GitHub Link](#)

- Implemented an ASL alphabet translator in Python using openCV, Mediapipe, scikit-learn, and NumPy.
- Integrated scikit-learn for machine learning tasks including training a RandomForest classifier to translate alphabet signs.
- Leveraged openCV for computer vision tasks including video capture and image processing.
- Utilized Mediapipe and NumPy to convert hand positions into 3D vectors for model training and testing.

Graph Theorist Sketch Pad • JavaScript, React, p5.js • [GitHub Link](#)

- Developed a web application allowing users to construct and visually interact with a graph data structure.
- Implemented algorithms such as spanning tree construction, Tarjan's algorithm for bridge detection, and a small physics simulation to allow graphs to move in a fluid-like motion.

Yelp Data Set • Python, PyQt5, PostgreSQL • [GitHub Link](#)

- Developed a robust interface for managing part of the Yelp data set storing over 10,000 records in PostgreSQL database.
- Built an intuitive user interface using PyQt5 to streamline data interaction and visualization.

CPU Scheduler Simulator • C • [GitHub Link](#)

- Implemented CPU scheduling policies such as First Come First serve, Round Robin, and Shortest Job First.
- The simulator calculates the time to complete tasks and the efficiency of the schedulers.

Air Hockey • C++ • [GitHub Link](#)

- Implemented computer graphics in C++ using the SFML graphics library.
- Leveraged physics formulas in order to simulate pseudo realistic game mechanics/physics.
- Implemented a method to connect two computers via TCP socket networking in order to host a multiplayer game.
